Cash flow from investment activities	8 662	248	(874)
Cash flow from financing activities	(9 775)	(1 228)	(1 504)
What are the key risk factors that are specific to the Issuer?			
Most material key risk factors	<p><u>Investments and integration</u> The Company is an integrated food solutions company and has an ambition to grow profitably, through broadening its core business model. It also aims at developing new business areas and new revenue streams, such as enabling a hydrogen economy, while driving sustainable performance on its core business. A challenge will be to prioritize and manage a high number of initiatives to allocate enough management attention and resources to ensure proper execution of new transformation initiatives, to transform these into revenue generating businesses, and at the same time with the same resources, keep momentum on operations and running the business (transform vs. perform). More generally, investments poses a risk of not being able to capture operational and financial benefits and synergies.</p> <p><u>Currency risk</u> Prices of the Company's most important products and raw materials are either directly denominated or determined in US dollars. A weakening U.S. dollar against other currencies can adversely affect the Company's results of operations. Further, there is a country risk exposure with focus on transfer risk for certain high-risk countries.</p> <p><u>Nitrogen commodity fertilizer prices</u> A large part of the Company's business consists of sales of fertilizer products used in agriculture. Demand for food and fertilizer, swings in</p>		

Summary

ISIN NO0011146383

	<p>agricultural prices along with changes in global and regional fertilizer production capacity could significantly impact the Company’s profitability.</p> <p><u>Cyber risk</u> Unauthorized remote access to digital industrial control systems may have potential impact that reaches from an undesired plant shut-down, up to critical conditions causing significant safety and reliability risks, financial and reputational damage. Ransomware is the main identified thread for cyber risk.</p> <p><u>Production reliability</u> The Company’s production may be interrupted due to unreliability and irregularities that may result in lost volumes and revenues. Production unreliability and irregularities may be a result of lack of resources with sufficient capacity and competence, insufficient systematic maintenance on regular basis, ageing plants and production equipment, and failure to meet targets on major maintenance stops. Production stops may also be caused due to process safety accidents or mishandling involving hazardous substances that could cause severe damage or injury to property, the environment and human health. Production stops may lead to disruption of supplies and markets.</p> <p><u>Health and safety</u> The Company’s production sites are large industrial plants, and many of the Company’s raw materials, intermediates and products are classified as substances dangerous to the health. Such a working environment contains various potential occupational health and safety risks to employees and contractors working on site.</p> <p><u>Regulatory framework</u> There is an increasing trend of stricter governmental regulations impacting both production economics and application of fertilizer related both to the environmental aspects and safety related aspects of handling and applying fertilizer.</p> <p><u>Natural gas and other raw materials</u> The pricing and availability of natural gas across regions is a strategic factor for the Company. The Company also purchases phosphate rock, energy, chemicals, ammonia and potash from a limited number of suppliers with limited alternatives. There can be no assurance that the Company’s supply of natural gas and other essential raw materials will not be delayed or interrupted and the availability and prices of natural gas and other raw materials may be negatively affected.</p> <p><u>Supply chain</u> The Company faces internal and external risks, in the production, industrial and crop nutrition part of the supply chain. Bottlenecks and inefficiencies in the planning, procurement, transport, handling or delivery of products may affect the Company’s ability to honour its commitments and could negatively impact the Company’s performance.</p>
